INVESTMENT BEHAVIOUR DASHBOARD

LEVEL 2 - INTERMEDIATE | TASKS 3-4

Prepared by: Akshay Gaikwad

Internship domain: Business Analytics

Organisation referenced in the task guide: Cognifyz Technologies

Tool: Microsoft Power BI Desktop and CSV-based analysis

Prepared from the supplied CSV, PBIX project, and Cognifyz Business Analytics internship task guide.

Task 3 — Descriptive Statistics

Sample standard deviation is used (pandas std default, ddof=1).

Numeric field	Mean	Median	Sample SD	Min	Max
Age	27.80	27.00	3.56	21	35
Mutual Funds	2.55	2.00	1.20	1	7
Equity Market	3.48	4.00	1.13	1	6
Debentures	5.75	6.50	1.68	1	7
Government Bonds	4.65	5.00	1.37	1	7
Fixed Deposits	3.58	3.50	1.80	1	7
PPF	2.02	1.00	1.61	1	6
Gold	5.97	6.00	1.14	2	7

Age mean 27.80; median 27.00; sample SD 3.56; range 21-35 years.

The seven numeric investment-score columns are coded values; the CSV does not define what higher or lower score values mean.

Task 4 — Most Preferred Investment Avenue

Avenue	Count	Share
Mutual Fund	18	45.0%
Equity	10	25.0%
Fixed Deposits	9	22.5%
Public Provident Fund	3	7.5%

Mutual Fund is the most commonly selected Avenue (18, 45%), followed by Equity (10, 25%), Fixed Deposits (9, 22.5%) and Public Provident Fund (3, 7.5%).

Investment Avenues is a separate Yes/No field: 37 Yes (92.5%), 3 No (7.5%). Do not confuse it with Avenue category.

Power BI evidence

The PBIX includes an Average Age KPI, an Avenue count bar chart and an Investment Avenue Mix doughnut. The full descriptive-statistics table is included here but is not currently shown as a PBIX visual.
